# MOTION CONSULTING GROUP

CASE STUDY

# Scaled Agility for Fintech

## The Challenge

To strengthen their client relationships and trust while maintaining their dominant market share, our client needed to be more predictable, rationalize their technical stack, improve code quality, respond faster to customers, enhance DevSecOps practices, and increase alignment and transparency with their business partners.

## The Solution

Motion Consulting Group initiated a quick-start method to planning at scale, working closely with leadership to identify the people, teams, and products to launch their first Big Room Planning. MCG created a comprehensive training roadmap to train over 500 employees that aligned with the client's stated goals and identified the biggest impact to creating high-quality, value-add code in a shorter amount of time. While working with the client, Motion launched eight (8) Agile Release Trains over a 1-year period.

## Outcomes

- Increased on time delivery from 67% to 84% across the teams
- Reduced Cycle Time by 5 days across the teams
- Increased percentage of items completed during a 2-week iteration by 57%
