

CASE STUDY

Technical Agility & Transformation for Railroad

The Challenge

To become a safer and more efficient railroad, our client needed to align their systems to run as a modern precision railroad which was a large shift from previous operations. This required multiple new applications quickly and aligning systems to support the new efficient data driven operations model needed to transform the railroad.

The Solution

Motion Consulting Group worked with the client to create stable, persistent teams by creating training, tools and the support necessary to help frontline leaders coach their teams to maturity. MCG analyzed technical practices and create strategy roadmaps to implement them. Motion worked closely with all levels of leadership to create a culture of continuous improvement through the client.

Outcomes

- Reduced time to deploy by 60%
- Reduction of people by 40%
- Increased profit margin
